Innovative Powered Picking Carts by Newcastle Systems

Newcastle Systems' PC Series **Powered Picking Cart** has been designed to hold a variety of equipment including a computer, printer, and scanner along with merchandise. With seamless power, it is possible to record inventory **real time** and **print labels on demand**. The PC Series Mobile Powered Workstation is ideal in warehouses, distribution centers, and manufacturing facilities to name a few.

Performing inventory management and label printing right as the product is handled results in significant productivity benefits. In receiving departments, inbound product can be received in, inspected, labeled and rerouted all on the same picking cart. This eliminates the product being handled multiple times and unnecessary foot steps.

The PC Series is extremely mobile. It can be moved and positioned with minimal effort ensuring operator usage throughout the facility with its high performance 6" rubber casters and narrow profile. This powered cart holds up to three shelves that are ergonomically adjustable and can be set at different heights to suit the operator and the task being performed.

The standard power package includes a 75, 100, 200 or 300 AH battery, a 350, 750 or 1,250 watt inverter and a 10, 20, or 30 amp charger. A battery volt meter is mounted to the top of the vertical mast to quickly show the operator what level of charge is in the battery. In addition, a number of optional accessories are also available and can be integrated in seconds for a highly versatile mobile cart.

For additional information or to set-up a product demonstration at your facility, visit
www.newcastlesys.com or call at 781.935.3450.

Newcastle Systems' commitment is to provide innovative cart solutions that help make equipment more mobile and information more readily available across an entire enterprise.
