## **Economical Retail Utility Cart by Newcastle Systems**

Newcastle Systems has designed an economical compact cart known as the RC Series. It continues the modular concept of other Newcastle Systems' carts creating a full workstation solution. Typical applications include “**product shelf labeling**”, “**printing on demand**” and “**price changes/mark downs**”.

With its sleek support members it can fit in a wide variety of applications including retail. Its small footprint makes it perfect for narrow aisles and small spaces. Designed with 5" swivel casters, it ensures easy maneuverability in any environment.

Newcastle Systems' rugged cart is constructed with 11 gauge steel and fully reinforced surfaces. It has been designed to handle rough treatment while holding up over time. The RC Series is a highly versatile cart which can be used in many departments. Each cart includes an 18" wide storage compartment for storing miscellaneous items such as documents, note books, other stationary items, and tools. **Optional power packages are also available upon request.**

A selection of supporting accessories further highlights the flexibility of this unique retail utility cart.

**For additional information or to set-up a product demonstration at your facility, visit**
