

PUSH CARTS, PULL PROFITS

Lower labor costs and speed up retail logistics with carts designed to deliver.

Retail distribution is under pressure.

With rising consumer expectations, rapid e-commerce growth, and ongoing labor shortages, retailers are being pushed to fulfill orders faster and more accurately than ever. While automation is often seen as the answer, it's costly, complex, and out of reach for many. What today's distribution centers need are practical, flexible solutions that boost efficiency—without breaking the budget.

From receiving to restocking, mobile powered carts help your retail ops stay agile and efficient.

Minimize unnecessary walking

Workers can bring their tools directly to the task—whether it's a PC, scanner, or label printer. No more long walks to fixed stations.

Increase throughput & productivity

Mobile powered carts let employees print shipping labels, scan items, and enter data right where they're working.

Improve accuracy

By bringing the system directly to the inventory, workers can label, scan, and update data on the spot. This reduces picking and labeling errors.

Reduce equipment bottlenecks

Mobile carts allow multiple workers to use equipment like printers and computers without competing for fixed stations.

Improve employee morale & retention

The reduction in walking and increased task efficiency means less physical strain for your workers.

Enhance flexibility in workflow design

With mobile powered carts, your facility can reconfigure its workstations instantly to meet changing needs—whether it's for seasonal demand or a layout shift.

MOBILE. NIMBLE. PROFITABLE.

In today's retail environment, speed and accuracy aren't luxuries—they're lifelines. Newcastle Systems mobile powered carts help distribution centers pick faster, pack smarter, and roll through peak demand with ease. Empower your team to work where the work happens and cut out the inefficiencies that slow you down.

Real-World Use Case

One of our retail clients implemented Newcastle Systems mobile powered carts in their warehouse to address labor shortages and speed requirements. The results were remarkable:

35%

PRODUCTIVITY
INCREASE

Workers could complete tasks without moving to static stations

20%

MORE ACCURATE
ORDERS

Thanks to real-time data entry

15%

DROP IN WORKER
TURNOVER

Due to the reduced physical strain

This small investment paid for itself within just **three months**—and the client has since expanded cart use to more areas of their operation.

"With Newcastle Systems carts, our retail DC cut travel time by 50% and doubled daily output. ROI in 3 months flat."

— Operations Manager,
National Apparel Retailer
